Code Snippets

```javascript
<script type="text/javascript">
let navbar = document.querySelector(".navbar");
let closeBtn = document.querySelector("#btn");
closeBtn.addEventListener("click", ()=>{
  navbar.classList.toggle("open");
});
</script>
```
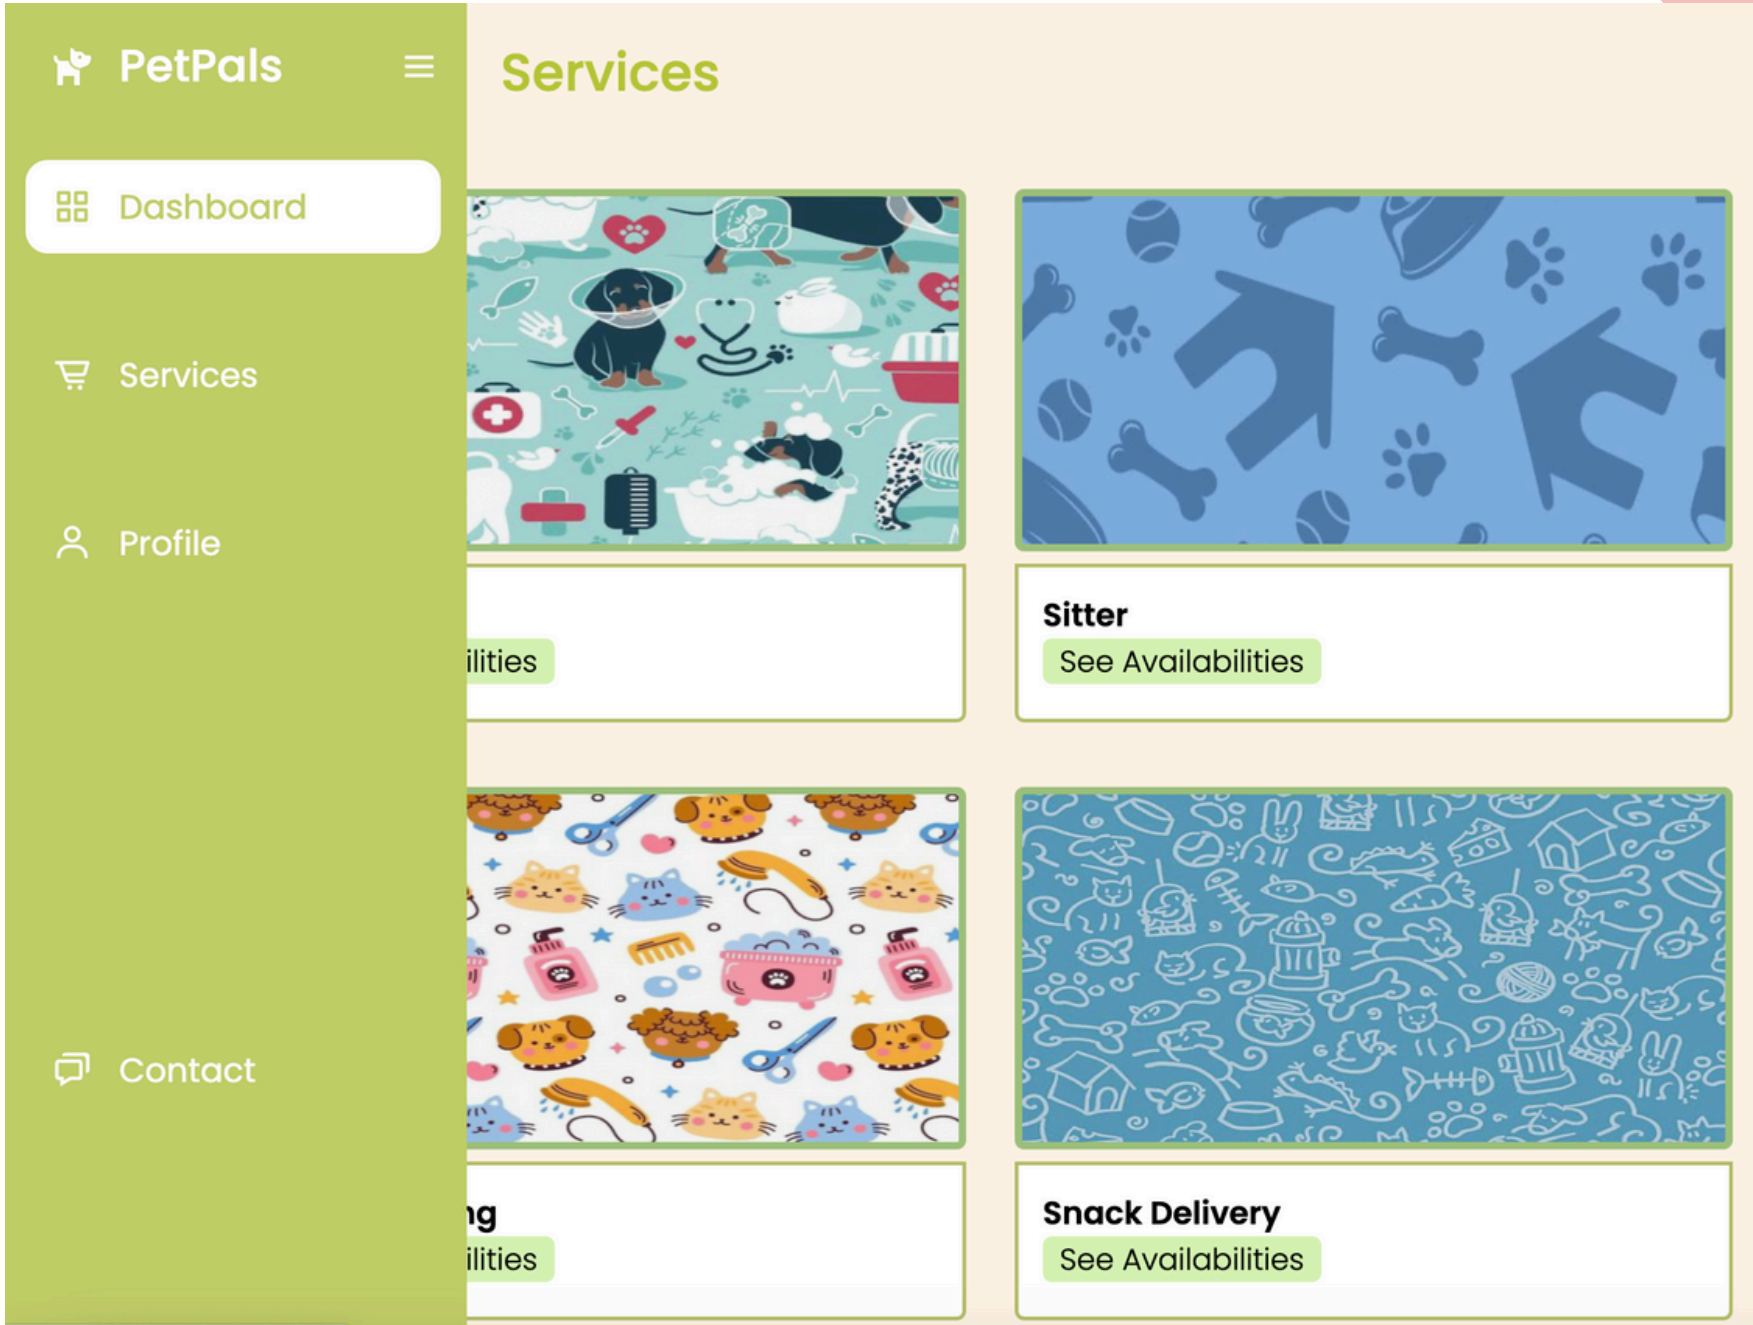

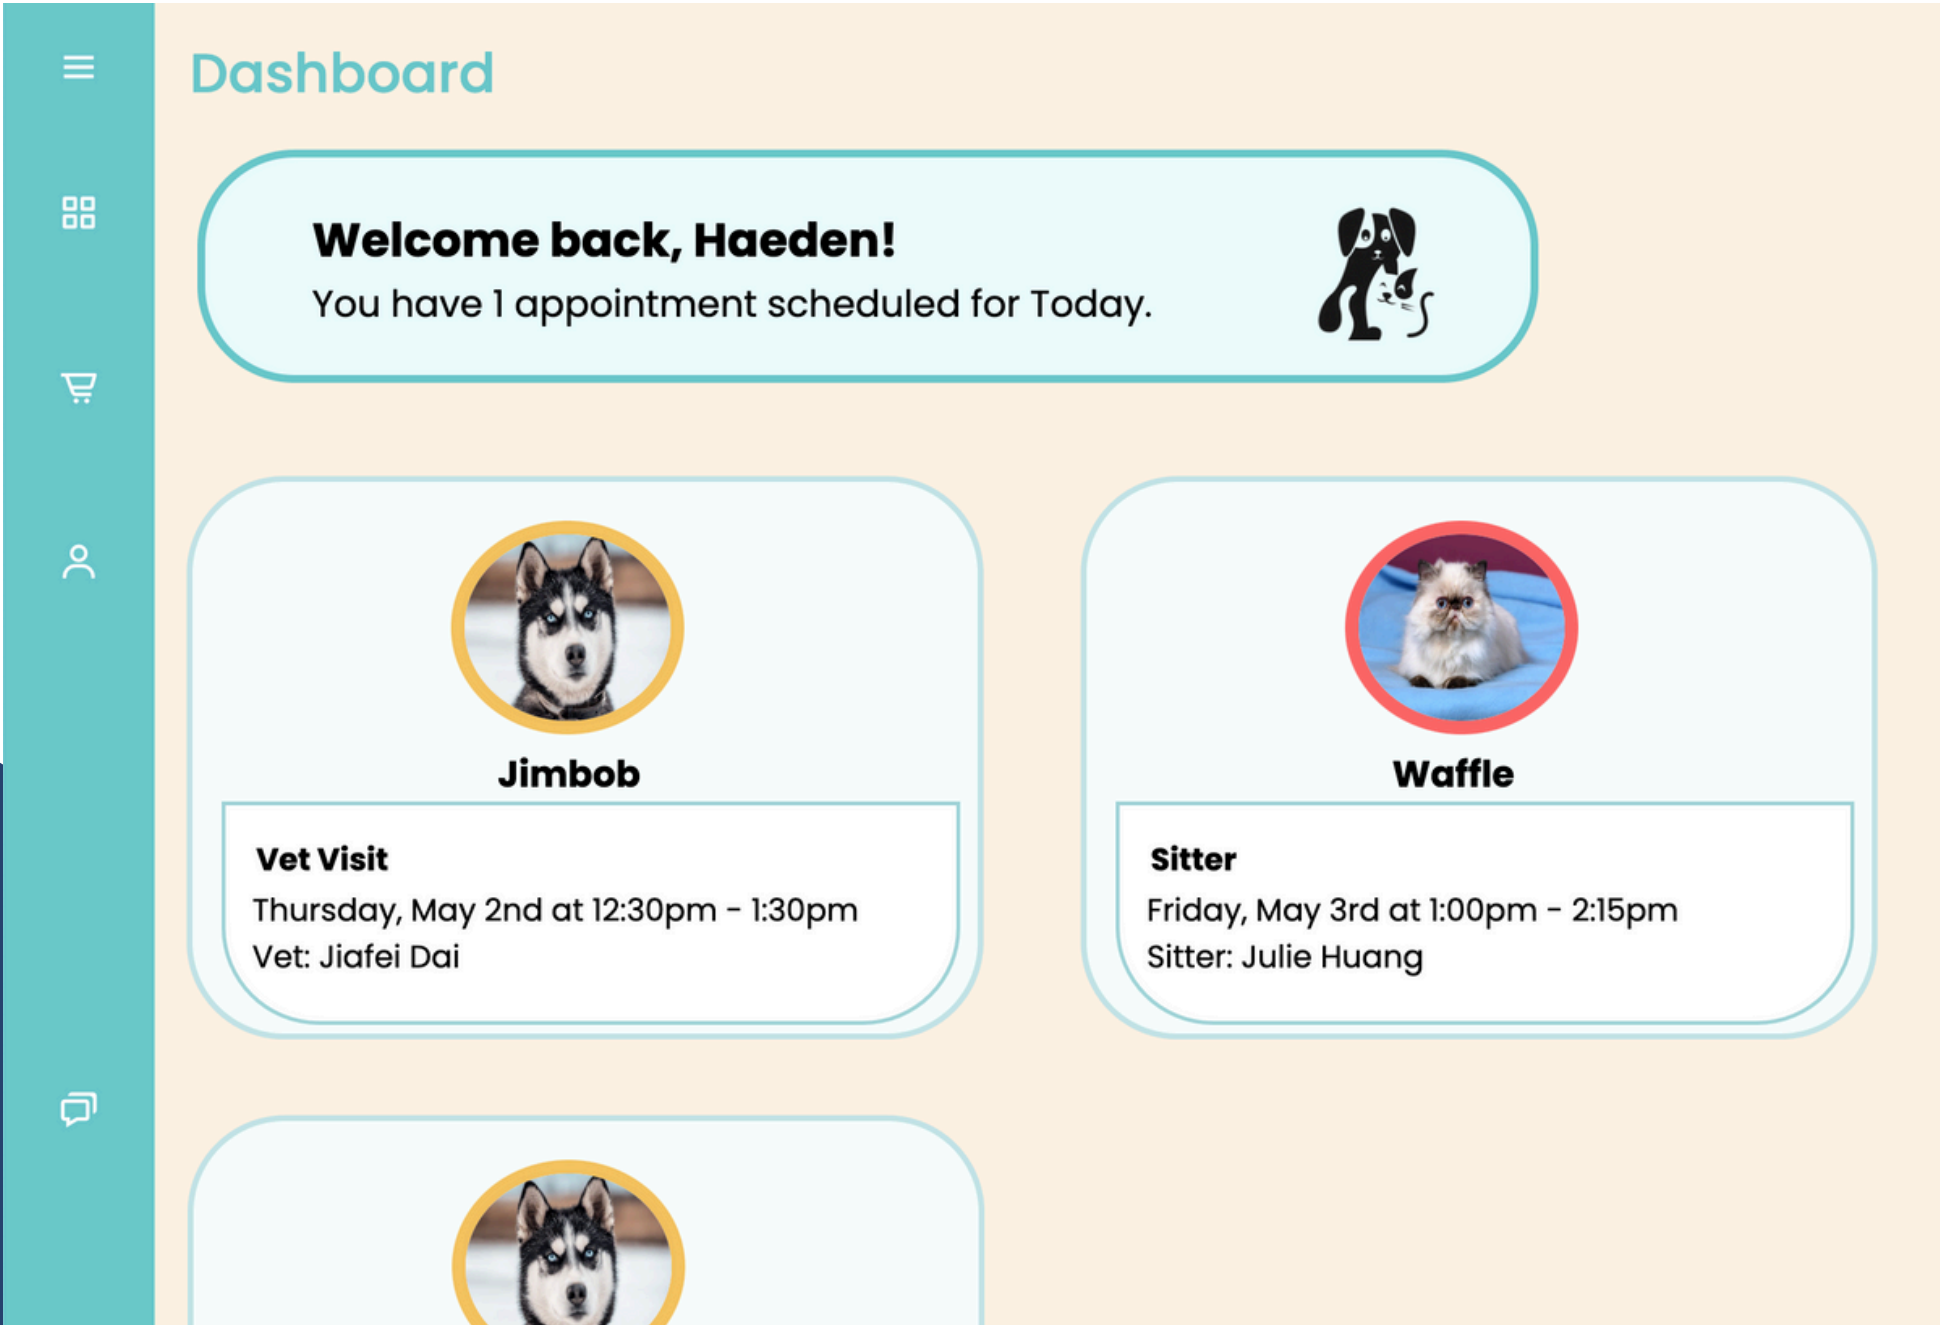

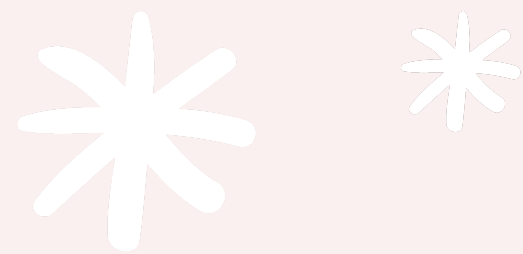

Javascript to extend ("open")
the nav-bar

```html
<div class="company-details">
 <i class='bx bxs-dog' id="dog"></i>
    <div class="company_name">PetPals</div>
    <i class='bx bx-menu' id="btn" ></i>
</div>
<ul class="nav-list">
 <li>
    <a href="../html/home.html">
     <i class='bx bx-grid-alt'></i>
     <span class="links_name">Dashboard</span>
    </a>
 </li>
```
